

Elevator Pitch:

Alternative Maze takes a twist on the classic maze game with new elements being introduced into each level. With the classic game mechanics for directions but it introduces keys, view changes and more. It is able to grow infinitely as each level is a new idea or concept behind it making it rewarding to those with creative thinking and patience.

Game Synopsis:

The game starts as a classic maze game with the introduction of keys used to unlock the exit. As you progress through the game the maze changes format, design and tools making each level completely different but familiar. The further the progression the stranger and difficult the maze becomes. Master the new tools and format in order to complete all the maps.

Objective:

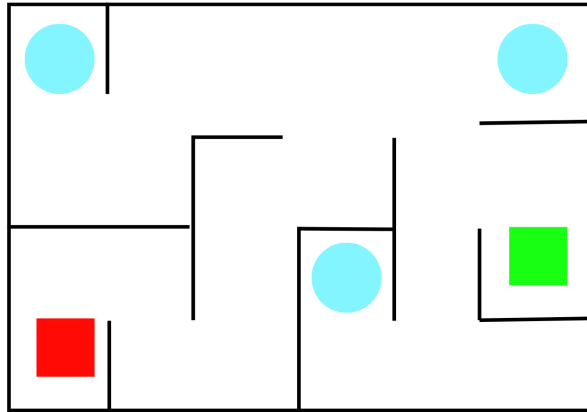

The objective of the game is to navigate through each maze, collect all the required keys, and unlock the exit to progress to the next level.

Mechanics Description:

The player controls a character navigating through a maze using familiar directional movement to explore and find the correct path. Throughout each level, keys are scattered across the maze, and the player must locate and collect all of them to unlock the exit. Once every key is obtained, the exit door becomes accessible, allowing the player to progress to the next stage. After completing a level, the maze evolves in both design and concept, introducing new challenges, mechanics, and visual styles that keep gameplay fresh and engaging. With each new level, the player encounters different tools and twists such as color testing, fake walls, unique maze structures, or new abilities that require creative problem-solving to master. This constant evolution of mechanics and environments ensures that every stage feels distinct while maintaining the familiar goal of escaping the maze.

Note: Saving levels but since there is only one level, the save files are implemented but it's just kinda there.

Mockup Example:

This is an example of a basic level for alternative maze. Has the key mechanics and elements of which all other levels will take from.
